Project Management Consultants Project Services

Who we are

Since our inception in 2014, Allied Projects has been focused on providing exceptional Project Management and Project Services to our clients. As a leading Project Management consultancy, we have built a strong reputation for providing solid, yet flexible, high-value-added project system solutions and processes.

Our ability to help clients achieve their targets is what sets us apart from others. We ensure successful project delivery for all of our clients.

The Allied Projects advantage

We are recognised by clients for our ability to initiate and develop effective and efficient data interface management tools and systems. These not only compliment their existing management tools, systems and processes, but also derive additional value in the form of reduced manual handling of data, and unambiguous slicing 'n dicing of management reports - providing full transparency of project health.

Best practice policy

We believe successful project delivery comes down to achieving our client's targets in ethical and sustainable ways; our employees take pride in following best practice policies and we always adhere to industry standards. In addition we work to the utmost highest professional standards. A few of the standards we follow include:

- AACEi: Association for Advancement of Cost Engineering (international)
- ACES: Australian Cost Engineering Society

Abiding by best practice policy ensures that we offer our clients transparency, honesty and accountability. We pride ourselves on acting as an independent consultancy to achieve realistic project outcomes.

Our clients

As Project Management and Project Services consulting specialists, Allied Projects work across the mining, oil & gas and commercial infrastructure industries.

Our clients include public, private, local government, as well as not-for-profit organisations. We have been associated with several high profile firms, engineering consultancies and owner teams, and we are proud to have been engaged on several major and iconic projects across Western Australia.

What we offer

Our consultancy services include:

- capital cost estimating
- project planning and scheduling
- cost control and management
- risk management and effective change management
- project forecasting
- meaningful project reporting
- project controls management

Our services include the development of work instructions, process manuals, and training material for classroom and one-on-one hands-on training in the new systems and processes introduced to projects.

Change the culture **Pave the future**

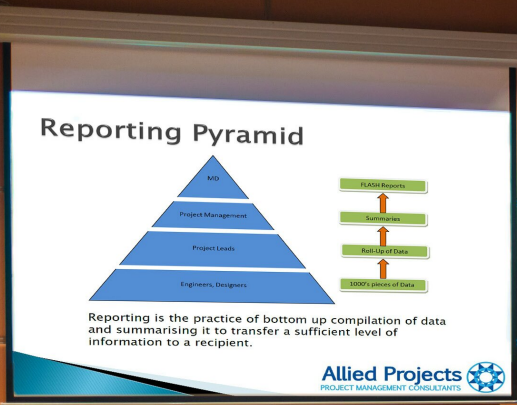

At Allied Projects, we believe we can advance the current standard of project services in Western Australia with the power of highly skilled forward-thinking project professionals; and by doing so, our clients and their projects can reap better results.

We are driven by the conviction that if project managers and project services professionals better understand and use Total Cost Management (TCM) and Triple Constraint (Time, Cost & Scope) principles, better project outcomes will be achieved.

By changing this culture, we believe we can pave the future.

Allied Projects at a glance

- 2014: Presented at Squire Sanders on “Issues concerning assumption of Risk and Project Controls”
- 2014: Presented at Curtin University to Master Project Management Students on “Project Controls & Systems”
- 2015: Guest Speaker at ASEAN EPC Projects in Jakarta talking on “Developing synchronised cross functional communication dynamics that drives clear and consistent information flow”
- 2017: Presented at Australian Cost Engineers Society (ACES) on “Common Industry Problem Facing Cost Engineering”

Committed to the not-for-profit & indigenous sectors

We are proud to be engaged on an iconic project which, when completed, will provide a safe space for Indigenous males recovering from dealing with domestic violence.

The Aboriginal Males Healing Centre project, located in Newman, Western Australia, is estimated at \$40 million, and Allied Projects is set to confidently deliver project management, planning & scheduling, cost and risk management services. Project completion is expected for 2020.

Opportunity for mentoring and coaching

Allied Projects offer the opportunity to gain access to project management and project services skills and insight that individuals and teams would otherwise have to spend years independently obtaining.

Types of mentoring and coaching include:

- Individual one-on-one guidance and mentoring sessions from highly experienced project services specialists.
- Group workshops offering professional development pathways in the area of project controls – presented by highly experienced and recognised project services specialists.

Mentoring and coaching is delivered by highly qualified and experienced specialists who have completed significantly large projects, ranging from several million to multi-billion dollars in worth. At Allied Projects we are passionate about empowering industry to deepen its understanding of true project management and project controls.

Advancement through learning

Through our educational partner we provide further education in all aspects of project controls, from entry level through to post graduate level, leading to internationally recognised qualifications from Association for the Advancement of Cost Engineering (AACE). Such qualifications include:

- Certified Estimating Professional (CEP)
- Planning & Scheduling Professional (PSP)
- Certified Cost Professional (CCP)
- Earned Value Professional (EVP)
- Certified Decision & Risk Management Professional (DRMP)

If you are an engineering professional with one or more of these AACE qualifications, then you may be eligible for Chartered Cost Engineer status through Engineers Australia.

Lead by the best

The Project Services arm of Allied Projects is headed by Allan Crow. Allan offers immense value with extensive international business experience as a project services manager, project controls manager, senior project manager, commercial manager and previously that of a power systems protection engineering manager.

Allan has a deep understanding of Project Controls, Project Management from his vast experience, which has been backed by his completion of a MBA at Heriot-Watt University (Edinburgh Business School - Scotland). He brings about dynamic leadership, out of the box thinking, strategic management, financial and business acumen and thrives on introducing successful outcomes.

Allan's specialties include, but are not limited to:

- Project Management
- Cost Engineering
- Project Controls
- Planning & Scheduling
- Risk Management
- Change Management
- Forecasting
- Capital Cost Management

The Project Services team also includes other highly qualified and experienced professionals who are available for project controls and project service.
